

AVINASH VERMA

Full Stack Developer | 9987912962 | avinashverma.1115@gmail.com | Hinjewadi, Pune

Professional Summary

Full Stack Developer with **4.8+ years of experience** building enterprise web applications using C#, .NET Core, ASP.NET Core, React, TypeScript, and Microsoft Azure. Experienced in developing REST APIs and backend applications using Python and Django, alongside .NET-based services. Skilled in designing scalable application architectures, data-processing pipelines, CI/CD workflows, and responsive frontend components. Hands-on experience with Domain-Driven Design (DDD), CQRS, Azure Functions, Azure Synapse, automated testing, application monitoring, and performance optimization.

Skills

Frontend: React.js, TypeScript, JavaScript (ES6+), Next.js, Redux, HTML5, CSS3, SCSS, Responsive UI Development

Backend & APIs: Python, FastAPI, Django, C#, .NET Core, ASP.NET Core, REST APIs, Azure Functions, Azure WebJobs, Stored Procedures

Databases: PostgreSQL, SQL Server, SQL, Stored Procedures, MongoDB, Azure Cosmos DB

Cloud & Azure: Microsoft Azure, Azure Functions, Azure Service Bus, Azure Storage Accounts, Azure Queues, Azure Redis Cache, Azure Data Factory (ADF), Azure Synapse, Azure Application Insights

Architecture & Engineering: Microservices, Domain-Driven Design (DDD), CQRS, Object-Oriented Programming (OOP), SOLID Principles, Performance Optimization, Secure Coding

Testing & Quality: Jest, Enzyme, Playwright, VSTest, Unit Testing, Integration Testing, Debugging, Code Reviews

DevOps & Collaboration: Git, GitLab, Azure DevOps, CI/CD Pipelines, Postman, Splunk, Agile Development, Technical Documentation ““

Professional Experience

TCS

August 2024 – Present

Systems Engineer

Client: Microsoft

- Built Azure WebJobs-based data ingestion pipelines to stage upstream data for downstream processing.
- Developed Azure Synapse pipelines using Python Spark scripts to process and transform **500K+ records**, leveraging asynchronous execution and parallel processing to improve throughput and optimize large-scale data-processing workflows.
- Architected REST APIs using **Domain-Driven Design (DDD)** and **CQRS**, with data operations implemented through stored procedures.
- Secured Azure file-upload workflows using **PGP encryption and decryption** for protected data exchange.
- Established Azure Application Insights monitoring to track processor performance and automate email reports, reducing manual operational effort.
- Developed serverless solutions using **Azure Functions** with Timer, HTTP, and Service Bus triggers, enabling event-driven processing and integration with Azure Storage, Queues, and Cosmos DB.
- Integrated Azure Functions with **Azure AD** and implemented caching to improve response times and reduce unnecessary API calls.
- Automated build, test, and deployment workflows through **Azure DevOps CI/CD pipelines** and VSTest.
- Developed React-based **PCF components** for Microsoft Dynamics 365 integration.
- Contributed to internal tooling for dynamic expression evaluation and business-rule processing.
- Implemented integration tests for serverless functions and web applications to improve application reliability.

Infosys

March 2022 – August 2024

Systems Engineer

Client: UBS

- Coordinated release management across development and production environments while serving as Deputy Software Component Manager (SWCM).
- Developed responsive frontend components using **React, TypeScript, HTML, and SCSS**, with Redux for state management and reusable component architecture.
- Developed automated unit-test suites using **Jest and Enzyme**, achieving **80%+ code coverage**.
- Delivered end-to-end features from requirements through development, testing, and deployment to production.
- Designed and maintained Splunk dashboards for application logs, production issue analysis, and operational visibility.
- Coordinated code reviews, delivery timelines, and project continuity while serving as interim project maintainer.

Revoir

4-Month Internship

React Developer Intern

- Developed frontend features for a developer-focused social networking platform using **React**.
- Implemented user profile functionality enabling developers to create and manage profiles within the platform.
- Implemented post creation and display features for sharing technical content within the developer community.
- Developed feed components to organize and surface posts for users, contributing to the platform's core social experience.

Personal Projects

AI-Powered Personal Digital Twin

Python, FastAPI, LLMs Live Demo

- Designed and developed an AI-powered personal digital twin to showcase technical skills, project experience, and problem-solving approaches through an interactive assistant.
- Developed backend API endpoints using **Python and FastAPI** to process user queries and orchestrate interactions with Large Language Models (LLMs).
- Integrated **LLM tool-calling capabilities** to enable the assistant to invoke tools, retrieve relevant information, and generate context-aware responses.
- Explored retrieval-augmented generation (RAG) to improve response relevance by retrieving information from project and technical knowledge sources.
- Implemented context-aware query processing and tool orchestration to demonstrate practical applications of AI integration, API development, and intelligent automation.

Certifications

- AZ-900 – Microsoft Azure Fundamentals
- Coding Ninjas – Front End Developer
- Coding Ninjas – React Developer

Education

United College of Engineering and Research

B.Tech, 2019
